Pleiades[1]

green indents
where miniature immaturity meets
the grass
aborted buds in sawdust
boar grunts,
i give off clear, calm & collected
so orange couches compliment green chairs
ladybugs nest
in rooms at night
and tell me things,

carry them all at once, i do it one by one,
'a person who knows stuff'

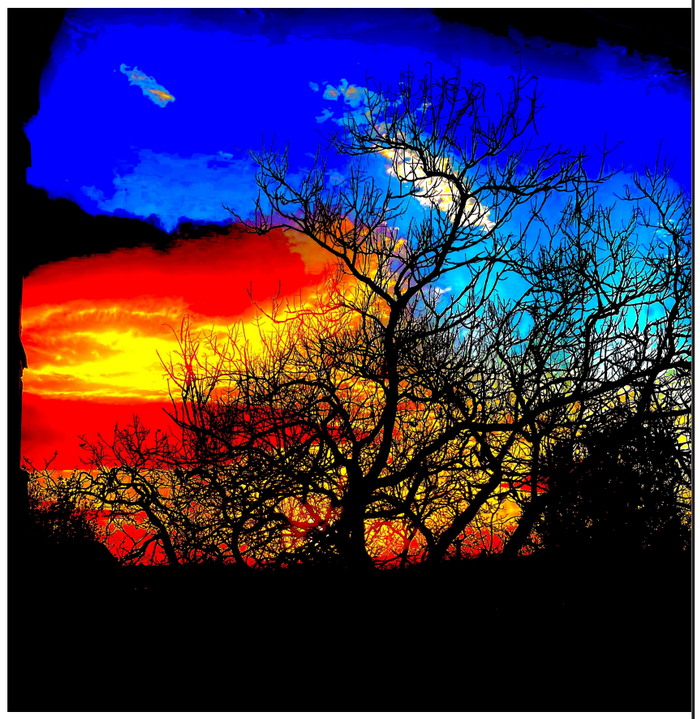

freezer in complimentary units,
breathing the same air
two weeks ago ,
impose strategies
if everything subsides, omitting a kind of etc loss,

one teaches birds in singing
i just can't let nothing go
like bridles around the chairs,
i want limmer (— ing) scents,
hop into the next one, some plastic organs
fives and an eight of a quarter
impatient in gross

forces predict femur fractures
I speak from creeks that visit at night
one lousy thing after
day in grass, in sky, in oil,
worship in whispers, mild lips & ashes

1 an asterism in the Eastern sky often remarked on by Pafers during clear nights

From the Infinite to the Hole
∞ → ○

Marie Georgette Louise and Marie Sidonie Ernestine

DING DONG

They're fiddling with us again. The two of us are hanging out here and they climb towards us.

We're doing fine, you know. Our clappers are silent inside us.
And now they're touching us. They've stuck something on us as well. It itches a little. And with
that thing, they make us sing.
Suddenly we had company, first a father and son who swept up a lot of pigeon poo.

PING PONG

- All that dust, and you weren't even wearing masks. We could see you, you know. We studied you. We were also a little worried about you.

And nine months later, the father came back with a broom and a bucket of vinegar.
Lights were shone on us.
We are just not comfortable in the spotlight.
We naturally don't like it. We want to sound in the dark.

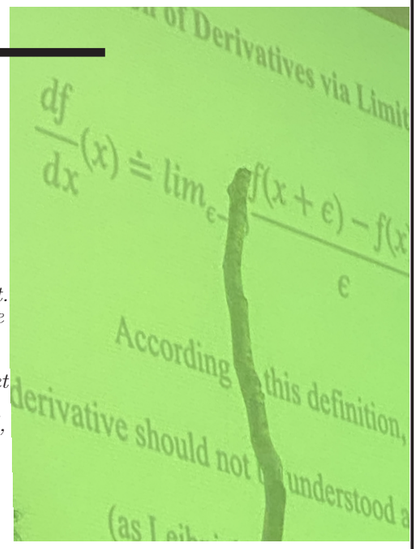

But all we could think was: We are a little worried about you. And: Be gentle with us. Be very gentle.
Ding ping, vamos carajo. Merciless. Dong pong. That's not very gentle.

Georgette's been taken away before by the hands of cruel men. You can read it in the book in the hallway. But we feel that these are different. We're hanging in here. Feel it. Don't hit too hard. Count, keep track of the points.

Play gently. Count gently. And we won't get angry. We hang still and our clappers, superfluous, in the air. It feels kind of good, doesn't it Georgette, to vibrate without a clapper. They're fiddling us, but they're actually doing it quite well.

No, we are not participating in the workshop. But we're fine, you know. Up here, in the dark.

We're doing well.

يمنحه أن تصبح شبحاً ما الذي يتطلبه أن تصبح ت تخيلياً ما الذي يمنحه أن تصبح ت تخيلياً ما الذي يتطلبه أن تصبح يوم عطلة ما الذي يمنحه أن تصبح يوم عطلة ما الذي يتطلبه أن تصبح مستوىً ما الذي يمنحه أن تصبح مستوىً ما الذي يتطلبه أن

[on October 23rd, I heard a loud crack among the wind accumulating in the courtyard. I went outside, into the back garden, and noticed that a big branch of a birch tree has been broken off by the storm. Many people in the house described the energy that day as unusually charged, maybe the wounded tree had something to do with it. It has been giving shade to us during the summer;

we felt & absorbed its woundedness, and reacted, even unknowingly.]

Fundamental Herakleitian Theorem of Calculus:
Change is the nature of all things
When we integrate the change
We go back to the source

The iron ball metaphor, discussing the relations of a chord subtending a very small arc :

Bhābh.2.10

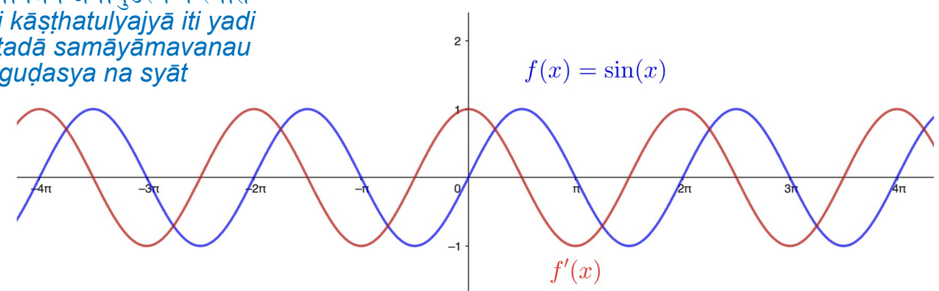

अन्यत्च- काष्ठतुल्यज्याभिधानम्युक्तमिति अशास्त्रज्ञः अपि जानतीति तेनैव काष्ठतुल्यज्या प्रत्याख्याता
anyat ca – kāṣṭhatulyajyābhidhānam yuktam iti aśāstrajñaḥ api jānātīti tenaiva kāṣṭhatulyajyā pratyākhyātā

Moreover- It is proper to say that a unit arc (*kāṣṭha*) can be equal (*tulya*) to its chord (*jyā*), even someone ignorant of treatises knows this; that a unit arc can be equal to its chord has been criticized by precisely this <Master Prabhākara>

वयम्तुब्रूमः- अस्ति काष्थतुल्यज्या इति यदि काष्थतुल्यज्या न स्यात्तदा समायामवनौ व्यवस्थानमेव अयोगुडस्य न स्यात
vayam tu brūmaḥ – asti kāṣṭhatulyajyā iti yadi kāṣṭhatulyajyā na syāt tadā samāyāmavanau vyavasthānam eva ayoguḍasya na syāt

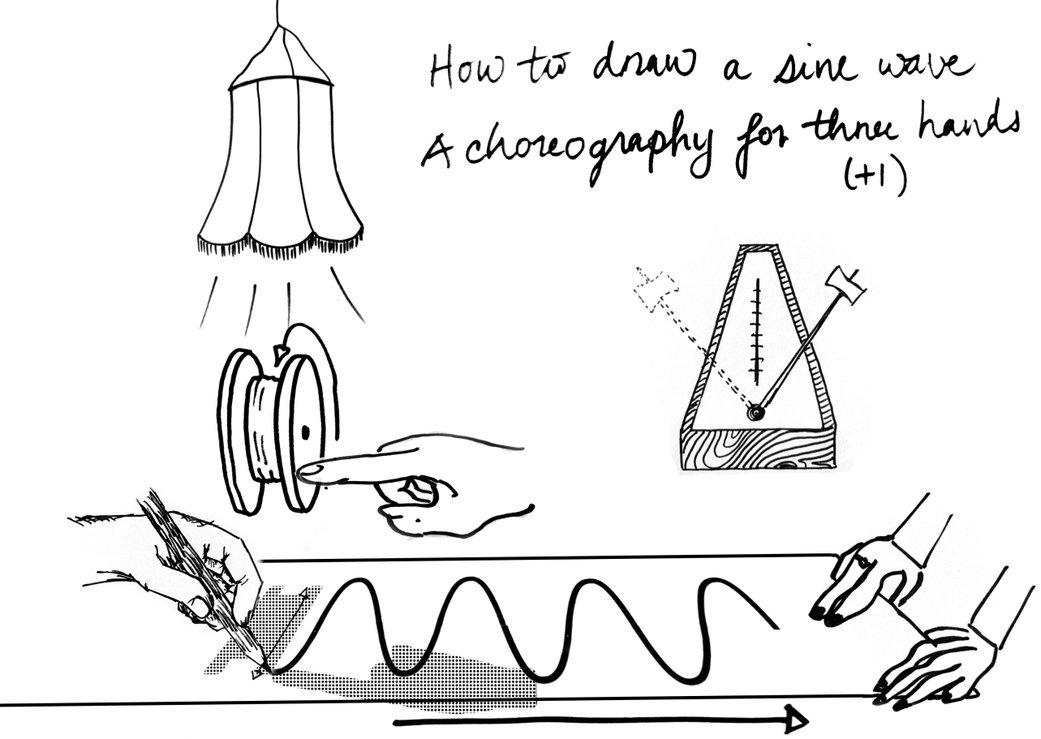

But we say- An arc equal to a chord exists. If an arc could not be equal to a chord then there would be no steadiness at all for an iron ball on level ground.

तेनानुमीमहे कश्चित्प्रदेशः सः अस्तीति येनासौ अयोगुडः समायामावानौ अवतिष्ठाते स च प्रदेशः परिधेः षण्णवत्याशः
tenānumīmahe kaścit pradeśaḥ saḥ astīti yenāsau ayoguḍaḥ samāyāmavanau avatiṣṭhate sa ca pradeśaḥ paridheḥ ṣaṇṇavatyāśaḥ
Therefore, we infer that there is some spot by means of which that iron ball rests on level ground. And that spot is the ninety-sixth part of the circumference.

A boundary has no boundary
$$\partial 2 = 0$$

Whose Determinability?

"The determination (I think) implies an undetermined existence (I am, because 'in order to think one must exist') [...] The entire Kantian critique amounts to objecting against Descartes that it is impossible for determination to bear directly upon the undetermined."
(Difference and Repetition 85/116)

"The symbol dx appears as simultaneously undetermined, determinable and determination. [...] In short, dx is the Idea—the Platonic, Leibnizian or Kantian Idea, the 'problem' and its being."
(Ibid. 171/222)

I think therefore I am over time

I am as such, I think in effect?
